Pre-Installation Countertop Checklist

Please read this form and confirm that all items are properly addressed. Print this form and fax, or otherwise return it, to your Elite Granite Representative when you are ready to proceed to the next phase of installation.

1. The customer is aware that Elite countertop installers can not be responsible for any plumbing work, such as the disconnection or re-connection of drains, faucets, and other items related to the countertop installation. Plumbing work must be completed prior to the demolition phase and sub top installation phase. Countertop installers are neither plumbers nor electricians; therefore the homeowner is responsible for the work and should hire a licensed plumber and electrician.
2. If the customer opts to do their own demolition of their existing countertop it must be done prior to the installation of a sub top by Elite.
3. The customer is aware that they must have **all** sinks and faucets onsite on the date a template is made.
4. The customer must disconnect all water lines and drains to all sinks before the start of any installation work by Elite.
5. The countertop installers will not install the faucet or the sink; unless it is an under mount **sink only**.
6. The customer is responsible for moving any major appliances (example stove) prior to the installation of your new counter top.
